nature

THE
Cosmos
COLLECTION

The entire galaxy, now within reach

With the increasing emphasis on a more sustainable architecture, powder coating is a natural choice. In comparison with alternative technologies, the powder coating process has less impact on the environment and always brings superior results - long-lasting protection and stylish appearance.

The Cosmos Collection from Jotun. Our closest match to the anodized aluminium colours.

The Cosmos Collection goes beyond the showcased options. You can now choose from the galaxy of attractive, deepest matt and metallic effect finishes, providing superior colour consistency and gloss retention.

This collection is available in the Jotun Super Durable product range, approved in accordance with Qualicoat Class 2 and certified to be AAMA 2604 compliant. Our anodized look powder coatings from the Cosmos Collection are proven to last 25 years. Protect and beautify your design with respect for the world we live in.

Increase your LEED points

The Cosmos Collection is one of our Green Building Solution products which can help you contribute to achieving credits in the major green building standards such as LEED and ESTIDAMA. On top of that, we have one of the most extensive lists of product specific third-party verified Type III EPDs - which are valued the most in terms of earning green building points in the coatings market.
