# Moments that catch your eye

High-shine metallic effects

THE  
LIFESHINE  
COLLECTION

# Inspired by the moments that truly shine

Inspiration can come in many forms, especially to designers and architects who look beyond the obvious to craft unique creations.

Instead of relying on traditional building materials, swatch books, or skylines, they find inspiration in real nature and human moments. These fleeting moments that we may all see but architects truly notice are the basis of our newest premium powder coating collection.

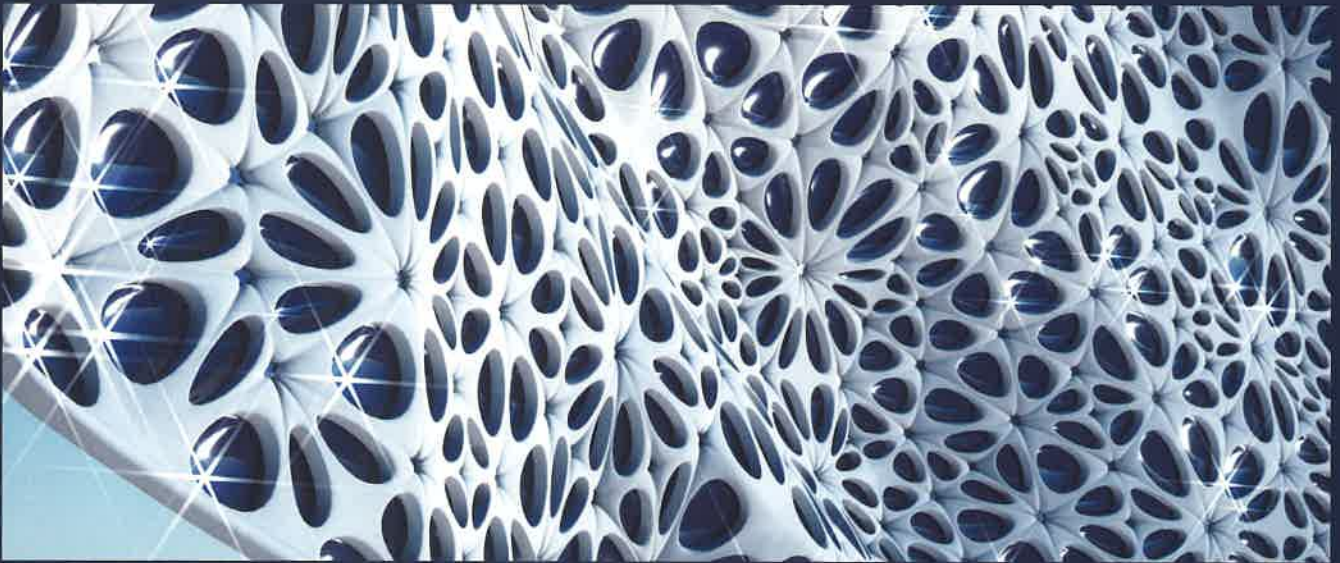

## **The Lifeshine Collection from Jotun, high-shine metallic effect powder coatings, inspired by the richness of life.**

This collection is available in the Jotun Super Durable product range approved in accordance with Qualicoat Class 2 and certified to be AAMA 2604 compliant. Our consistently high-shine metallic effect colours are proven to last through 25 years of moments.

# Increase your LEED points

The Lifeshine Collection is one of our Green Building Solution products which can help you contribute to achieving credits in the major green building standards such as LEED and ESTIDAMA. On top of that, we have one of the most extensive lists of product specific third-party verified Type III EPDs - which are valued the most in terms of earning green building points in the coatings market.
